

Online Summer Program 2020

Our summer program will be offered for seven weeks, Monday through Friday, from July 6th-August 21st, commencing on July 8th and ending on August 16th. This virtual summer curriculum is designed to provide a balance of academic enrichment and fine arts. We will continue to offer the basic Montessori curriculum while integrating an enriching summer program. Each week, there will be a new theme incorporating a craft. We will offer enrichment programs from some of the best instructors in the industry, including music, drama, gymnastics, and yoga. Virtual summer camp is open to current students, as well as those not currently enrolled at Global Montessori. This program is best suited for children ages 4-6 years old, including Kindergarten children. For more information regarding the fees and other details, please contact me at monica@globalmontessori.net.

Exploring Outer Space

The children will fly through our solar system and beyond to explore the wonders of the cosmos. The young astronauts will explore the planets in our solar system and the stars and constellations beyond. They will even learn what it takes to be an astronaut and how real astronauts train to travel and live in space.

Aquatic Animals

This underwater adventure will introduce the children to the life cycles, food chain, and habitat of numerous marine creatures. The children will also learn to locate the oceans on a world map and explore underwater habitats through stories and poems.

Feathers and Wings

From talking parrots to flightless penguins, the children will learn about birds from a variety of habitats all over the world. We will start with the lifecycle and parts of a bird, and then explore the behavior and calls of all kinds of birds.

All About Insects

During this segment, we will explore the fascinating world of these invertebrates, such as butterflies, beetles, and bees. We will learn about their characteristics, life cycle, and how they contribute to the environment.

Rainforest

We will bring the wonders of one of Earth's oldest living ecosystems, the rainforest, right into the virtual classroom. The children will discover a variety of plants and animals from the largest collection of species in the world. The children will also learn about the conservation efforts to protect and save this important ecosystem.

Deserts

The children will explore the vast, barren terrain of deserts all around the world, and learn about the plants and animals who thrive in living conditions too hostile for most. We will learn everything from how deserts are formed to how people interact with them.

Journey to Ancient Egypt

The young archeologists will uncover the beliefs, customs, and traditions of one of the world's most famous ancient civilizations. The children will learn how the Nile River allowed them to thrive and create technology incredibly advanced for the time. We will also explore their careful process to prepare mummies and the beautiful pyramids they built to honor their pharaohs.
